Introduction

As a first-year B.Tech student specializing in Computer Science and Cyber Security, assuming the role of a Student Digital Ambassador presents a unique opportunity to bridge the gap between technical knowledge and everyday online safety. The primary objective of this CSE0001 Digital Literacy project is to develop a comprehensive Digital Literacy Portfolio. This portfolio is designed to help my peers effectively navigate the complexities of the digital world, from establishing a professional online presence to understanding the critical nuances of secure and responsible communication. Given my academic focus on network defense and data protection, I am acutely aware of the vital importance of safe internet practices, proactive digital footprint management, and defending against emerging cyber threats. To achieve the project's goals, I have systematically completed five distinct tasks that map directly to the course modules. These foundational tasks encompass creating educational infographics, setting up professional networking platforms, tackling coding challenges, practicing proper email etiquette, and analyzing a real-world cybercrime case study. The culmination of this work is organized within a single GitHub repository, serving as both an academic submission and a permanent professional asset that I will present to the faculty committee.

Task 1: Infographic

I created a Digital Literacy Awareness Infographic using Canva, a user-friendly online design tool. The infographic was designed as a one-page visual resource aimed at helping my peers understand the concept and importance of digital literacy. It covers key topics such as the meaning of digital literacy, safe internet practices, and maintaining a professional online presence. I used icons, short text blocks, and contrasting colors to make the content visually engaging and easy to understand at a glance.

The design highlights how digital literacy is essential for academic success and responsible online behavior. It also includes practical tips such as using strong passwords, avoiding suspicious links, and maintaining a positive digital footprint.

Key Points Covered in the Infographic:

- Definition and importance of digital literacy
- Safe internet practices (passwords, phishing awareness)
- Professional online presence (LinkedIn, digital footprint)
- Useful digital tools for students (Canva, Google tools)
- Responsible communication and online behavior

One interesting aspect of this task was learning how to simplify complex ideas into concise visual elements. However, I found it slightly challenging to balance design and content without overcrowding the infographic. Overall, this task improved my creativity and helped me better understand the importance of presenting information effectively in a digital format

Task 2: Digital Portfolio

I built my Student Digital Portfolio by creating and updating profiles on key professional platforms, including GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose in building a strong digital presence. On GitHub, I created a profile README with my basic details and learning goals. On LinkedIn, I updated my education section with my current degree and expected graduation year. Kaggle was explored as a platform for data science learning and practice.

These platforms are widely used by recruiters, educators, and professionals to evaluate skills and engagement. Building profiles on them is an important step toward creating a professional identity online.

Key Points Covered in Task 2:

- Created/updated profiles on GitHub, LinkedIn, and Kaggle
- Added basic academic and professional information
- Understood the purpose of each platform
- Learned how to present a professional digital identity
- Took screenshots as proof of work

One important learning from this task was understanding how a digital portfolio reflects my skills and interests. Initially, it was slightly challenging to decide what information to include and how to keep it professional yet simple. Over the next four years, I plan to regularly update these profiles by adding projects, certifications, and achievements. This will help me build a strong online presence and improve my chances of internships and career opportunities .

Task 3: Platforms

I explored coding and collaboration platforms to understand how they support learning and teamwork. I created an account on HackerRank and completed a beginner-level problem, which helped me understand basic programming logic and problem-solving techniques. This platform is useful for improving coding skills through regular practice and challenges.
In addition, I used Google Forms to create a Digital Literacy Awareness Quiz consisting of five questions. The quiz included both multiple-choice and short-answer questions. I also viewed responses through the linked Google Sheets, which demonstrated how data can be collected and analyzed efficiently.
Key Points Covered in Task 3:

- Created an account on HackerRank and solved a beginner problem
- Learned basic coding and logical thinking skills
- Designed a 5-question Digital Literacy quiz using Google Forms
- Explored response collection using Google Sheets
- Understood the importance of collaboration and online tools

One interesting aspect of this task was seeing how coding platforms make learning interactive and engaging. Creating the Google Form was also useful as it showed how easily surveys and quizzes can be conducted. Initially, understanding the coding problem took some effort, but it improved my confidence. Overall, this task helped me realize how these tools can support my academic growth and collaboration with others in the future .

Task 4: Email Etiquette

I focused on understanding professional communication and email etiquette. I drafted two formal emails—one requesting an assignment extension from a professor and another expressing interest in a summer internship. While writing these emails, I ensured that each included a clear subject line, proper greeting, well-structured body, and a polite sign-off. This helped me understand the importance of tone, clarity, and professionalism in digital communication.

In addition, I created a Social Media Do's and Don'ts checklist to promote responsible online behavior among students. This task highlighted how communication style and online conduct can impact one's personal and professional image.

Key Points Covered in Task 4:

- Drafted two professional emails with proper structure
- Learned correct email etiquette (subject, greeting, body, closing)
- Created a Social Media Do's and Don'ts checklist
- Understood the importance of respectful and clear communication
- Identified common mistakes in digital communication

One situation where poor digital communication can cause problems is sending an email without a clear subject or using an informal tone with a professor. This can lead to misunderstandings or being ignored. Such issues can be avoided by following proper email etiquette, being concise, and maintaining professionalism. Overall, this task improved my communication skills and made me more aware of how to interact responsibly in digital environments

.

Task 5: Cybercrime Awareness

I worked on a cybercrime awareness case study and prevention guide to understand online threats and how to stay safe. I chose **phishing** as the topic, which is a common cybercrime where attackers trick users into sharing sensitive information such as passwords or bank details through fake emails or messages. I studied how phishing attacks are carried out, who is usually targeted, and the serious consequences such as financial loss and identity theft. I also created a "Stay Safe Online" checklist with practical tips, including safe browsing habits and precautions for online payments. This task helped me understand how important it is to be alert while using digital platforms.

Key Points Covered in Task 5:

- Studied phishing as a type of cybercrime
- Understood how phishing attacks are executed step-by-step
- Identified common targets such as students and online users
- Created a prevention checklist with safety tips
- Included awareness about reporting cybercrime (1930 helpline & portal)

One thing that surprised me was how easily people can fall victim to phishing due to realistic-looking messages. Even a small mistake like clicking on an unknown link can lead to serious consequences. As a result, I will be more cautious about verifying links and messages before taking any action. This task improved my awareness of cybersecurity and encouraged me to adopt safer online practices in daily life .

Conclusion

The Digital Literacy Project helped me develop a strong understanding of essential digital skills required in today's academic and professional environment. Through the five tasks, I learned how to create visual content, build a professional online presence, use coding and collaboration platforms, communicate effectively through emails, and stay aware of cyber threats. Each task contributed to improving my practical knowledge and confidence in using digital tools.

I also realized the importance of maintaining a responsible and professional digital identity. Skills such as email etiquette, safe internet practices, and portfolio building are not only useful during college but also for future career opportunities.

Overall, this project was a valuable learning experience that enhanced both my technical and communication skills. It has prepared me to use digital platforms more effectively and responsibly, and I will continue to apply these learnings in my academic journey and beyond .

Key Learnings

Key Learnings from the Digital Literacy Project:

- Understood the concept and importance of digital literacy in academic and professional life
- Learned to create engaging visual content using design tools like Canva
- Developed a professional digital portfolio using platforms like GitHub and LinkedIn
- Gained basic coding and problem-solving experience through practice platforms
- Learned how to use collaboration tools like Google Forms and Google Sheets
- Improved professional communication skills, especially email etiquette
- Understood the importance of maintaining a positive digital footprint
- Gained awareness about cybercrimes such as phishing and ways to prevent them
- Learned safe internet practices and responsible social media usage
- Built confidence in using digital tools effectively for learning and growth

These learnings have helped me become more aware, responsible, and confident in navigating the digital world, which will be beneficial for both my academic journey and future career .

Skills Gained

Skills Gained from the Digital Literacy Project:

- **Digital Content Creation:** Ability to design infographics and visual content using tools like Canva
- **Professional Profile Building:** Skills to create and manage profiles on platforms like GitHub and LinkedIn
- **Basic Coding Skills:** Improved logical thinking and problem-solving through coding practice
- **Data Collection & Analysis:** Ability to create surveys using Google Forms and analyze responses via Google Sheets
- **Communication Skills:** Writing clear, formal, and professional emails with proper etiquette
- **Time Management:** Planning and completing multiple tasks within deadlines
- **Critical Thinking:** Understanding and simplifying complex digital concepts
- **Cybersecurity Awareness:** شناخت (understanding) of online threats like phishing and safe browsing practices
- **Digital Responsibility:** Maintaining a positive digital footprint and responsible social media usage
- **Adaptability:** Learning and using new digital tools effectively

These skills will be highly useful in my academic work, internships, and future professional career, helping me become more efficient and digitally competent .
